SUMMARY

Product engineer shipping full-stack with an **agent-first workflow** (Claude Code, Codex): customer interviews → working **v0 in 1.5 days**. Founder of a live App Store product (**2,000+ signups**).

EDUCATION

- **University of Bristol** Bristol, UK
MEng Engineering Mathematics, First Class Honours Sep 2020 – Jun 2024

EXPERIENCE

- **Cogram** Remote
Product Engineer Feb 2026 – Present
 - **Product-Led Onboarding**: Took the platform from sales-led-only to self-serve: designed and shipped a **14-day trial** onboarding flow for an enterprise AEC SaaS, now generating **4–10 inbound signups/week**
 - **Mobile Platform Ownership**: Rearchitected the meeting-capture upload pipeline from single-zip to **chunked, resumable S3 uploads** with idempotent ingestion (uploads survive dropped connections and app exits); shipped configurable **field-report types** adopted across client organisations
 - **Discovery Velocity**: **4 enterprise customer interviews** in one week → built a working scheduling **v0 in 1.5 days** (multi-agent workflow: **Claude Code, Codex**); now used in demos to prospective clients
- **LINQ** Remote
CTO & Technical Co-founder Sep 2025 – Jan 2026
 - **Database & API Design**: Designed **PostgreSQL** schema with **pgvector HNSW** vector similarity and **PostGIS** geo-ranking; async **FastAPI** backend with repository pattern and **Pydantic** validation
 - **Mobile Architecture**: Engineered **React Native** app on a **Zustand + React Query + MMKV** offline-first state architecture; **Auth0 JWT** auto-refresh with an interceptor queue preventing concurrent **401** storms
 - **Infrastructure as Code**: Designed **CI/CD** pipeline (**GitHub Actions** → ECR → **ECS Fargate**) with **Terraform** IaC; CI authenticates to AWS with short-lived **OIDC** tokens instead of stored keys
- **ScrollBuddy** Remote
Founder & iOS Developer Aug 2025 – Present
 - **Native iOS Integration**: Built custom **Expo** native modules bridging **iOS Screen Time API** (DeviceActivity framework) with **Swift**, including **App Group** coordination between main app and shield extension
 - **Offline-First Architecture**: Designed offline-first architecture: **MMKV** encrypted storage, dual event queues (optimistic vs confirmed), idempotent background sync with exponential backoff
 - **Social Accountability System**: Designed buddy-approval architecture: blocker edits require a friend's sign-off, streaks invalidate on circumvention. **2,000+ signups**, **696 buddy connections**, multiple App Store releases
 - **Growth Engineering**: Built agent-driven marketing pipeline (content ideation → image generation → scheduled API posting) producing 4 days of multi-account content in **30 minutes**; **2M+ organic views** across launch content

PROJECTS

- **Sign Language Detection – \$2.5K Hackathon Winner**: Built coordinate-based NN using **Google MediaPipe** for hand landmark extraction with decentralized ML (Filecoin + Lilypad). **70%** accuracy on ASL dataset. Encode Club Feb 2025.
- **Aviini Ltd (E-commerce)**: Built eBay/Etsy API integrations with automated cron scheduling for revenue tracking; **£25K profit** at 25-35% margin over 18 months.

SKILLS

- **Languages**: TypeScript, Python, SQL, Swift (native modules)
- **Engineering**: React Native/Expo, Next.js, FastAPI, PostgreSQL (pgvector, PostGIS), Zustand, React Query
- **Cloud & DevOps**: AWS (ECS Fargate, RDS, S3, CloudFront), Docker, Terraform, GitHub Actions, Supabase
- **Agentic**: Claude Code, Codex, multi-agent orchestration, MCP tooling
